Corruption prevention training

Workshops on applied research methods and tools to analyse and understand corruption and governance, and how such research can inform practical next steps and policy actions
Corruption prevention training

Who?
Anti-corruption practitioners, academics

What for?
Acquire skills to better understand drivers of corruption and to develop evidence-based anti-corruption programmes and initiatives

Why?
- There is no one size-fits-all strategy to fight corruption; success depends on understanding the context
- Research is a powerful tool to gain insights into context-specific drivers of corruption
- Anti-corruption practice is more effective when it responds to identified drivers of corruption
- Measuring the impact of anti-corruption initiatives is hugely important but rarely properly implemented
Courses

Corruption research and anti-corruption practice
This course offers guidance in developing detailed anti-corruption programmes on the basis of in-depth corruption risk assessments. The aim of the risk assessments is to identify the nature and manifestations of different drivers of corruption in a local context. It also covers practical tools to develop a theory of change, log frames and the basics of monitoring and evaluation to support effective anti-corruption programmes.

For: Anti-corruption practitioners
Duration: 5 days

Developing context-sensitive social accountability initiatives
The objective is to develop better tools for citizen engagement to strengthen local governance and improve corruption outcomes. The course demonstrates how to collect information about the beneficiaries of social accountability initiatives, assessment methods to identify suitable participatory strategies, and how to apply techniques such as participatory monitoring of public services.

For: Practitioners at the community level
Duration: 2.5 days

Power and influence analysis
This is a research-based approach aimed at identifying and evaluating corruption risks taking into account social, economic and political factors in the local context. The workshop covers how to apply the power and influence methodology and tailor it to different sectors and contexts.

For: Anti-corruption practitioners, academics
Duration: 2.5 days

Quantitative and qualitative research methods on corruption and their application
This course is designed to provide professionals and interested stakeholders with the conceptual and methodological tools to undertake corruption research. It is relevant to a wide variety of topics, contexts and aims.

For: Anti-corruption practitioners, academics
Duration: 2.5 days
